

# Website Prototype (2) Layout

## Login stuff

Date  
- pop down, with all available dates

Meal (Breakfast, lunch, etc)  
both forward to login

Save Meal

Load Meal

Requirements Box

- Fields for differentiation, errors, etc

check on or off, on for details

Food grid  
- selected and deselected foods

Nutrition Box (with graphs)

- When hovering / selecting a food  
- text turns red when invalid with requirements  
- Use drop down for include, exclude, inequality, etc

Dietary restriction checkboxes (veg, gluten, etc)  
- deselects foods that are invalid  
but highlights

- specifying with this as a field a la nutrition

- Have a load screen / preset animation  
of colors of buttons flashing for

lets say 30 seconds

- After that meal generation is  
called off

- This is a one-screen design, so preferences  
cannot be saved yet outside of meals
